

Vinod Kumar Kondepudi

Senior Technical Advisor (Azure), Readiness Lead (AKS,ARO), Site Reliability Engineer (AKS,ARO), Lead DevOps Engineer, Linux, Kubernetes Admin, Automation and Configuration Management

CURRENT ROLES & RESPONSIBILITIES

- Providing technical and SME coaching for Delivery Partner (DP) Engineers.
- Experienced as Lead Systems Engineer/Cloud MLOPS with the ability to work efficiently in both independent and teamwork environments with a strong understanding of Business-Driven software integration and Delivery approach.
- Guiding the TCS, Infosys, Poland Team, Vietnam (WICLOUD), China Team (Wicresoft) and MT managers with DevOps operations management & SRE, shift planning, backup planning of the resources.
- Collaborate with stakeholders to identify gaps and recommend technical, process and tool opportunities.
- Working/collaborating with the global technical teams to increase the technical/ process expertise and faster resolutions.
- Providing technical oversight to delivery partners in their interactions with customers. Ensuring that operations are aligned with technical requirements and best practices.
- Reviewing escalations to product groups on behalf of delivery partners, such as Incident Change Management (ICMs) or bug reports.
- Case management duties, such as Managing incoming cases, performing inspections, prioritizing escalations, technical reviews, triage cases effectively, focusing on improving the wellness of the support system and reducing the time to resolution for cases.
- Interacting with customers on complex/political cases to support frontline engineers and maintain technical expertise.
- Managing escalations of high-complexity customer issues from the support or field teams. Taking the ownership of these escalated cases and working towards their resolution.
- Gathering and analyzing customer feedback and insights to understand their needs, preferences, pain points and act as the advocate of the customers within the organization.
- Advocate for customer-centric changes and improvements in products and services.

AWARDS

- ACE Award, Star Achiever |FY21 H1
- CSS Impact Award, FY22 Q3 Team Winner
- CSS Award, Customer Obsessed, FY23 Q3 Team Winner

PROFILE

Versatile & Innovative Technical Advisor with 16+ years of experience in architecting/automating, implementing, and managing cutting-edge deployment automation of cloud resources. Proficient with Configuration Management tools, Containerization and in developing CI/CD Pipelines.

WORK EXPERIENCE

- I am currently working as a Senior Technical Advisor (Azure Kubernetes Service) at **Microsoft** since June 2022 to Till Date.
- Worked as Support Escalation Engineer, Readiness Lead of AKS Pod for Microsoft Pvt Ltd (CSS) , from **Nov 2019 to June 2022**
- Worked as Lead DevOps Engineer for **Oracle** India Pvt Ltd, Oracle Utilities Cloud Engineering, and Hyderabad from **Dec 2017 to Nov 2019**.
- Worked as Consultant for **Verizon** Data Services India Pvt Ltd, Hyderabad (**Oct 2007 – Dec 2017**).

EDUCATION

- B.Tech , Computer Science, **Osmania University** with 71%.
- Board of Intermediate Education, AP with 83% aggregate.
- SSC: Board Of Secondary Education, AP with 72% aggregate.

SKILLS & ABILITIES

➤ Technology

- Having experience in Azure Kubernetes Services and Azure RedHat OpenShift
- Experienced in Kubernetes administration, configuration and troubleshooting.
- Highly Experienced In RHEL, OEL, Ubuntu, Centos, Fedora, HP UX, MAC OSX etc.
- Highly Experienced in Automation for Provisioning Applications using Shell, Python, Ruby and Using Docker, Kubernetes, YAML.
- Expertise in Automating Several Day-to-Day Process and tasks doing a design of pipelines using Jenkins using CI/ CD/CF & Jenkins integration with cloud labs.
- End-to-End Knowledge on Release, Build and Deployment, Configuration Management Modules etc.
- Experienced in Google Cloud, AWS and Azure almost 5+ years.
- End to end knowledge Java Based Application Build and deployment using maven, Gradle etc. Have excellent Knowledge on Java Memory Management, Performance Tuning, and Thread Management in Java etc.
- Install/Configure DB(Oracle, My SQL) , Middleware (WebLogic, Tomcat, OAS) , Webserver (Apache, OHS, IIS), Jboss in both Single/Multi-tenant Architecture Modes with a High Business Continuity Model.
- Automated & Implemented Full Disaster Recovery for Critical Application in Oracle Cloud Like Oracle Fusion products like OBIEE, SOAetc.
- Knowledge of Operations and Production Support with large Mission Critical, Business Critical and System Critical applications.
- Experience with Firewall, Proxy, VPN technologies. Vulnerability assessments, Policy Audits are just few of the everyday tasks along with working towards Project & Team Management on various occasions.

➤ SITE RELIABILITY ENGINEER

- Provide architectural and practical guidance to software development to improve resiliency, efficiency, performance, and costs.
- Monitor and report on service level objectives for a given applications services. Work with business and product owners to establish key performance indicators.
- Capacity planning and management – create, use, maintain a capacity model for on-prem and AWS hosting, based on E2E user flow profiles.
- Work with product operations team to resolve trouble tickets, developing and running scripts, and troubleshooting services in a hosted environment.
- Provide technical insight on development projects.
- Assist with testing and validating production applications.
- Assist with building a global framework that automates the process of building, testing, and deploying software for all code bases through all environments.
- Follow best engineering practices and such as architectural design, unit and regression testing, test-driven development, and continuous integration frameworks.
- Coach and mentor team members to develop.

TECHNOLOGY EXPOSURE

OS	RHEL/CentOS/Ubuntu Solaris, HP-UX, MAC OSX , Windows All
Database	Oracle, My SQL
Middleware	Web logic 8.x-12c, Tomcat 4.x-7.x, IIS, Apache Http Server.
Automation, Build & Deploy	Chef (Configuration Management + Provisioning Automation) ,Ansible Jenkins & Hudson (Build & Deploy Automation) SumoLogic, New Relic (Log Monitoring)
Networking	Big IP and other Proxy Debug tools.
Monitoring	Nimsoft, Solar winds , Ignite, MON,Nagios, etc.
Source Control	PVCS, SVN,GITHUB, Bit Bucket
containerization & orchestration	Docker and Kubernetes
Scripting	Shell, Python, Terraform,Groovy

Project Technology Life Cycle Management

- Involved in Preparing Project Plans & Planned Maintenances using Excel, Microsoft Project Planner Etc.
- Implement Quarterly Backup and Restore Testing for Various Applications.
- Implement DRP for Application, DMZ, and DB Layers.
- System Sizing & Capacity Planning.

WORK EXPERIENCE

Oracle India Pvt Ltd:

Role: - **Lead DevOps Engineer.**

Responsibilities and Contribution:

- Support Oracle Cloud Operations for Application Support for oracle product Dataraker.
- Configuring build automation and release management systems to support development strategies.
- Designing and implementing automations to ensure code quality, technical standards and legal standards.
- Having hands on expertise on tools like Docker, Kubernetes GIT, ANT, Make, Maven, Gradle, Jenkins, Sonarqube, Ansible, Puppet, Chef etc.
- Tier 4 Application support dealing with Escalation requests/issues related the Application issues, Memory leaks, Monitoring Message Queues, JSON Messages, Oracle Database Sql slowness, OBIEE Reporting Performance issues.
- Involved in writing scripts for doing bulk migrations.

- o Thoroughly Follow the Process related to Cloud Change Control using Jira, Source Control using Apache SVN , Incident Management using Right Now CX.
- o Implemented a Procedure to do the on call shift handover using SVN to redirect the on call pagers to specific email aliases using Power MTA.
- o Effectively implement/Follow Process for taking servers out of rotation from a cluster and doing the mini maintenance or at the time of Deployment.
- o Effectively involve in Maintenance tasks for entire POD Full Downtime or Datacenter downtime.
- o As a Part of Cloud Engineering Implementation Team, where I am responsible for implementing the DataRaker Application end to end (Provisioning /Maintenance – AMS/Interface Design etc.
- o Automate the Day-to-Day Process – On call Support, Unplanned Environment Shutdown, Planned Maintenances, Testing the Environment, Managing the SFTP etc.

Verizon Data Services India Pvt Ltd :

Role: **Senior Analyst**

Surveillance and Fault Isolation: - Mastars, Delphi, Oasis, Etms

Responsibilities and Contribution:

- o Configuring build automation and release management systems to support development strategies.
- o Designing and implementing automations to ensure code quality, technical standards, and legal standards.
- o Configuring build automation and release management systems to support development strategies.
- o Designing and implementing automations to ensure code quality, technical standards and legal standards.
- o Having hands on expertise on tools like Docker, Kubernetes GIT, ANT, Make, Maven, Gradle, Jenkins, Sonarqube, Ansible, Puppet, Chef etc.
- o Carried out Infrastructure support which includes operating system and application support
- o I am first point of contact for all the issues of VDSI Linux Environments
- o Provided complete monitoring and resolutions to the issues for DEV, SIT, UAT, Stage and PROD environments. Designed many policing scripts to ensure code quality and code standards.
- o Installation and renewal of SSL certificates on PROD and Non-Prod servers.
- o Involved in successful completion of extending the File system space.
- o Automated bounce process of application servers as per the requirement on time.
- o Written Shell scripts for automating activities and as per the requirements on time.
- o Monitored the resource's usage periodically.
- o Managing user administration. Designed and implemented git flow and admin for develop release and master branch.
- o Trouble shooting and day-to-day system administration.

Applications Support and Enabling Automation: - WFM, FLPS, PPMT, MLTB, INMS , ICIS

Responsibilities and Contribution:

- Deploying the Web application and Load balancing the apache and tomcat Requests.
- Shell scripts and Python Scripting to call web services for various scheduled and routine tasks.
- Expertise in migration and up gradation off weblogic servers, updating the jdk versions , applying the patches .
- Shell scripts and Python Scripting to call web services for various scheduled and routine tasks
- Carried out Infrastructure support which includes operating system and application support
- Ensuring High Availability through Clustering and Load balancing across data centers.
- Enhance the security of your system at filesystem level, network level, and for users / dynamic users.
- Enhance the security for specific services, like webserver and mailserver.
- Protect potential software problems with the security options available in systemd.
- Installation and Configuring the Monitoring tool Like Nagios and NPPE Clients.
- Installation and Configuring the ANSIBLE and JENKINS
- Adminstrate in advanced Linux Box's and lplanet web servers and Weblogic Servers.
- Deploying the Web application and Load balancing the l Planet and Weblogic Requests.
- Trouble shooting and day-to-day system administration.
- Ensure that all the Tickets were closed within the SLA period.
- Extensively worked on Weblogic , Apache http , Apache Tomcat , Jboss as administrator for installations , configuration, Application Components deployment, performance tuning including troubleshooting and maintenance
- Providing 24*7 on call support in production, UAT environments on rotation basis.
- Installation and configuration of Ansible and Jenkins in Dev, qa, uat and prod env.
- Provided complete monitoring and resolutions to the issues for DEV, SIT, UAT, Stage and PROD environments. Designed many policing scripts to ensure code quality and code standards.
- Automated bounce process of application servers as per the requirement on time.
- Written Shell scripts for automating activities and as per the requirements on time.
- Monitored the resource's usage periodically.
- Managing user administration. Designed and implemented git flow and admin for develop release and master branch.
